WHY DID WE CREATE TRUSTBOLT?

At TrustBolt, we believe every employee should have easy access to genAI services to help them succeed for the organisation.

⚡ Trust Bolt

At TrustBolt, we want CEOs to be confident in encouraging AI adoption across their organization.

⚡ Trust Bolt

TrustBolt gives all employees access to the AI models they need through a single application designed for teams...

⚡ Trust Bolt

... while recording everything in and out of every AI model and alerting for sensitive information...

⚡ Trust Bolt

... while also enabling you to reduce AI costs by managing model entitlements and quotas at a department group and individual level all in one place.

⚡ Trust Bolt

⚡ Trust Bolt

Adopt AI with Confidence

WHY DID WE CREATE TRUSTBOLT?

TrustBolt is the first dedicated platform designed to accelerate your generative AI journey with confidence.

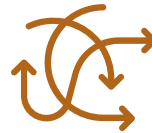

- Leaders and Staff are clamoring for increased access to AI capabilities.

- New models are being released almost daily. Often requires expertise and resources to “try” these.

- Sophisticated companies and early adopters have already deployed multiple models and services across various groups and functions, resulting in a fragmented environment.

- Users are unsure where to go and what they have access to and what should be used for different purposes.

- Services are often not designed for teams and come with minimal front-end capabilities.

- Smaller companies often struggle to know where to start, given the numerous options now available.

- ☐ Can you deploy new models to all your users at the click of a button?
- ☐ Do your users know what AI services are available to them? Do they know how to access them?
- ☐ Can your users collaborate with AI models and services as a team?
- ☐ Do all your users know how much they are spending on AI and feel a sense of accountability?

- ☐ Can you easily grant (and remove) employee access to different models from a single location?
- ☐ Can you efficiently allocate AI charges and costs across teams and departments?
- ☐ Can you see who is spending more/less on AI each month?
- ☐ Can you easily “redirect” users from one model to another including API users?

- ☐ Do you know every prompt sent to every AI model and the associated generated output? Is this logged in a single place for all models?
- ☐ Do all your oversight functions (Compliance, Legal, Infosec, etc) have access to everything in/out of an AI model?
- ☐ Do you know where all your AI models are hosted and what protection is in place?

**If the answer to any of the above is “No” –
We can help!**

WHAT IS TRUSTBOLT?

TrustBolt is the first dedicated platform designed to accelerate your generative AI journey with confidence.

- TrustBolt provides simple **Model Management** capabilities to quickly and safely connect to 3rd party, hosted, or internally developed AI Models through a single console, allowing you to deploy and manage models more easily.

- TrustBolt provides a consistent amazing **end-user experience designed for teams** with all the features they need to leverage AI, increasing familiarity to users and accelerating adoption.

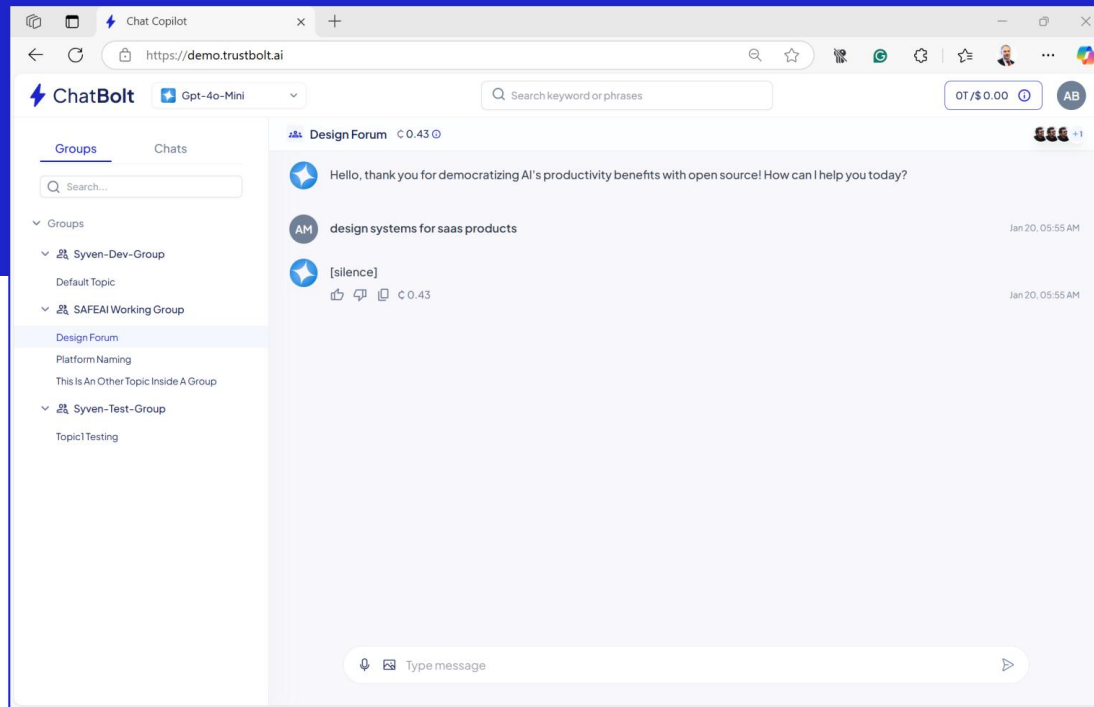

- TrustBolt provides a full suite of **Cost Management** tools, including full cost transparency to end users, entitlements, and quotas. Reduce 3rd party AI costs through usage vs end user pricing.

- TrustBolt provides complete **Oversight Management** of every prompt and response between your users (people and systems) and all AI Build trust through transparently logging all information between your users and AI models with full search and data mining capabilities.

WHAT IS TRUSTBOLT?

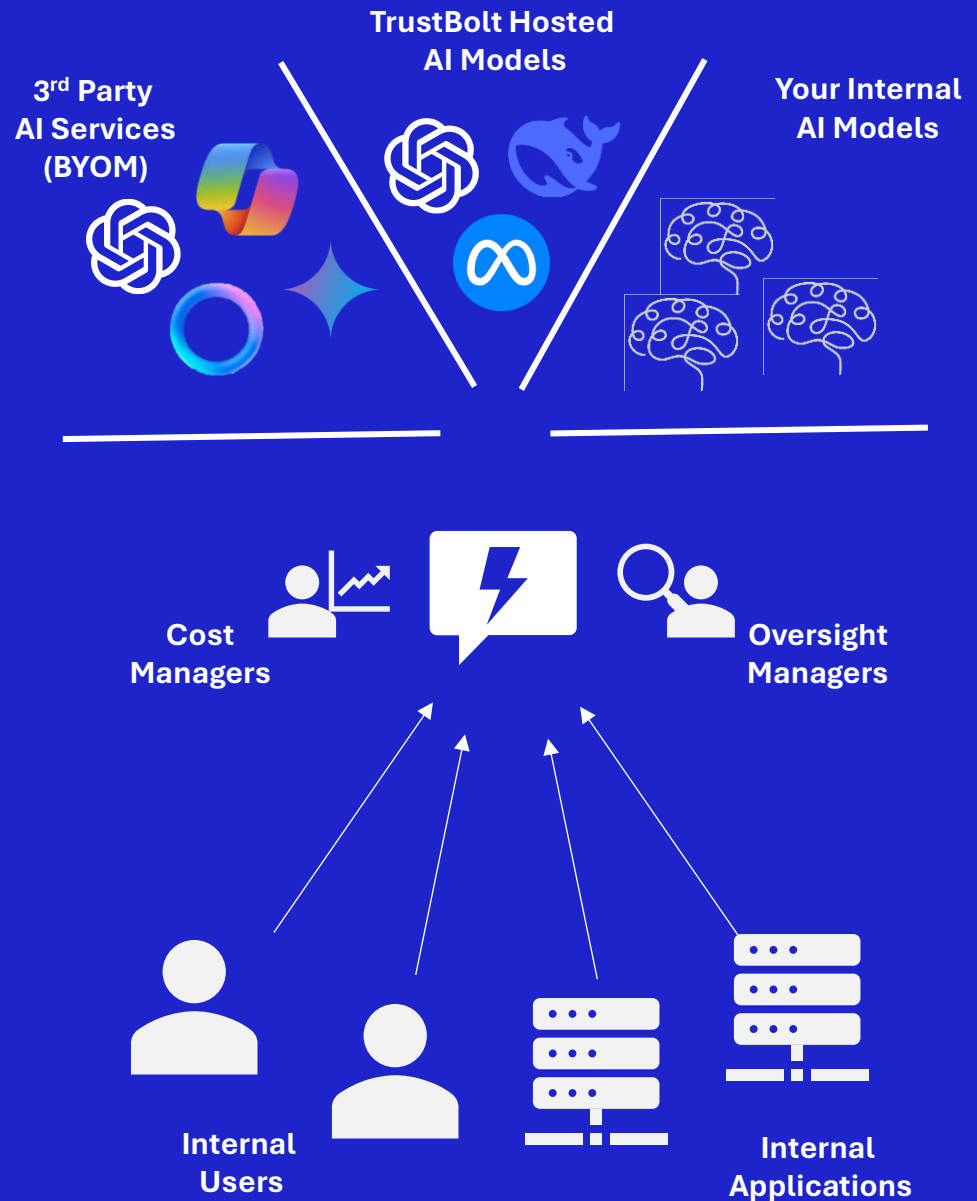

AI Adoption starts by providing an amazing single end-user experience, designed for teams, and independent of your AI-model of choice.

... we then provide detailed cost and oversight management capabilities on top!

HOW DOES TRUSTBOLT WORK?

**TrustBolt is a safe
“AI-gateway”
between your
employees,
systems and data,
and the AI models
you access**

HOW DOES TRUSTBOLT WORK?

**Multiple
implementation
approaches
based on client
needs.**

APPENDIX

 Trust Bolt

Now we have some questions for you.

What is the most appealing feature we have talked about today?

Single User Interface
Cost Management
Oversight Management
(Something Else!)

What keeps you from immediately saying “YES” to this service?

You have all these concerns covered already
You don’t believe this will solve for the concerns we discussed
I have other concerns you are not covering

What would be your preferred pricing model for this platform?

Per User
Per Usage
% of spend
Fixed Price Platform Fee

What other features would you like to see in the future

Model recommender – “best” model for the prompt
Historical Context
“Passporting” for Model Migrations
Integrated Data Masking
Integrated Data Loss Prevention (DLP)
Prompt & Response Caching

WHY DID WE CREATE TRUSTBOLT?

“Employees are 3x more likely using gen AI today than their leaders expect”

“Employees will be the ones to make their organizations AI powerhouses. They are more ready to embrace AI in the workplace than business leaders imagine. They are more familiar with AI tools, they want more support and training, and they are more likely to believe AI will replace at least a third of their work in the near future.”

Source: McKinsey Jan 2025

TrustBolt accelerates access and reduces learning curve accessing the rapidly evolving universe of gen-AI models through a single familiar application.

WHY DID WE CREATE TRUSTBOLT?

“Half of Business Leaders believe the development and release of gen-AI tools is to slow in their organizations”

“Business leaders need to embrace this speed and optimism to ensure that their companies don’t get left behind. Yet despite all the excitement and early experimentation, 47 percent of C-suite leaders say their organizations are developing and releasing gen AI tools too slowly”

Source: McKinsey Jan 2025

TrustBolt accelerates access and reduces time-to-market for new model adoption by providing a baseline governance framework that can be leveraged across all models

WHY DID WE CREATE TRUSTBOLT?

“Leaders want to increase AI investments and accelerate development, but they wrestle with how to make AI safe in the workplace.”

“Data security, hallucinations, biased outputs, and misuse (for example, creating harmful content or enabling fraud) are challenges that cannot be ignored. Employees are well aware of AI’s safety challenges. Their top concerns are cybersecurity, privacy, and accuracy.”

Source: McKinsey Jan 2025

TrustBolt increases confidence and trust in AI services by providing a baseline governance framework that can be leveraged across all models.

FAQ

Is my data safe inside TrustBolt?

TrustBolt has been designed and built by teams that have worked highly sensitive Financial Services systems. All data is encrypted using XXX and managed without our own cloud environment based in Microsoft Azure.

What 3rd Party AI services do you currently connect to?

We currently provide “out the box” integrations to the following 3rd Party AI services. You will need to have an existing contract with any vendor we connect to.

- OpenAI ChatGPT xxx, xxx, xxx, and xxx

What OpenSource AI models can you host?

We currently provide hosted services for the following open-source models. We do not modify these models in anyway.

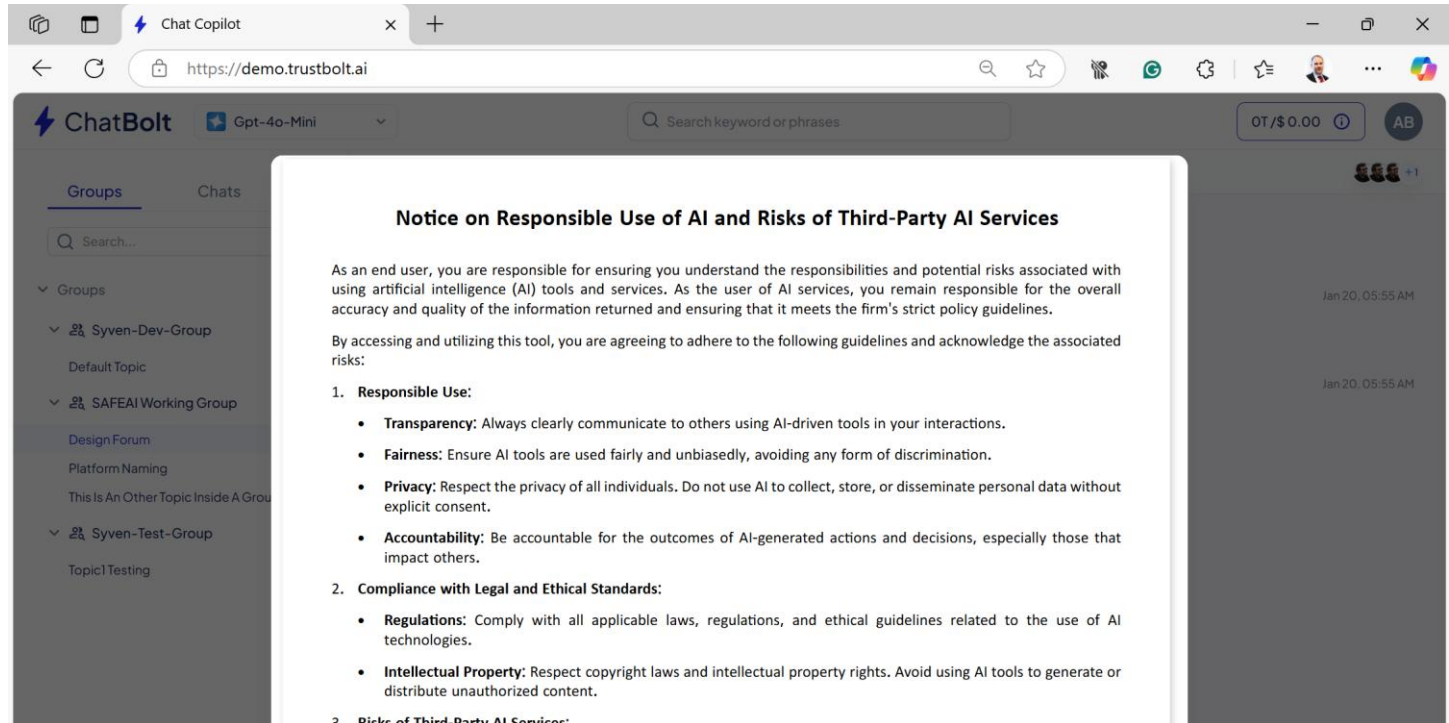

- Xxx
- Xxx
- xxx

How do you reduce costs for 3rd party AI services

TrustBolt can lead to reduced costs in a few ways.

1. Many third-party AI services have a per-user monthly pricing and API usage-driven models. When you give your users access to these services via the end-user model, you pay each month no matter how much each user leverages the tool. By leveraging trustBolt, companies are able to move you to the per-interaction usage-based model, which is often cheaper in the long run for most “normal” users especially when “pooled” across an entire enterprise.
2. Many third-party AI services charge premium amounts for foundational governance functionalities – ie single sign-in, promote and response logging, and cost analytics. TrustBolt ensures you are selecting the right AI service based on gen-AI value-add.

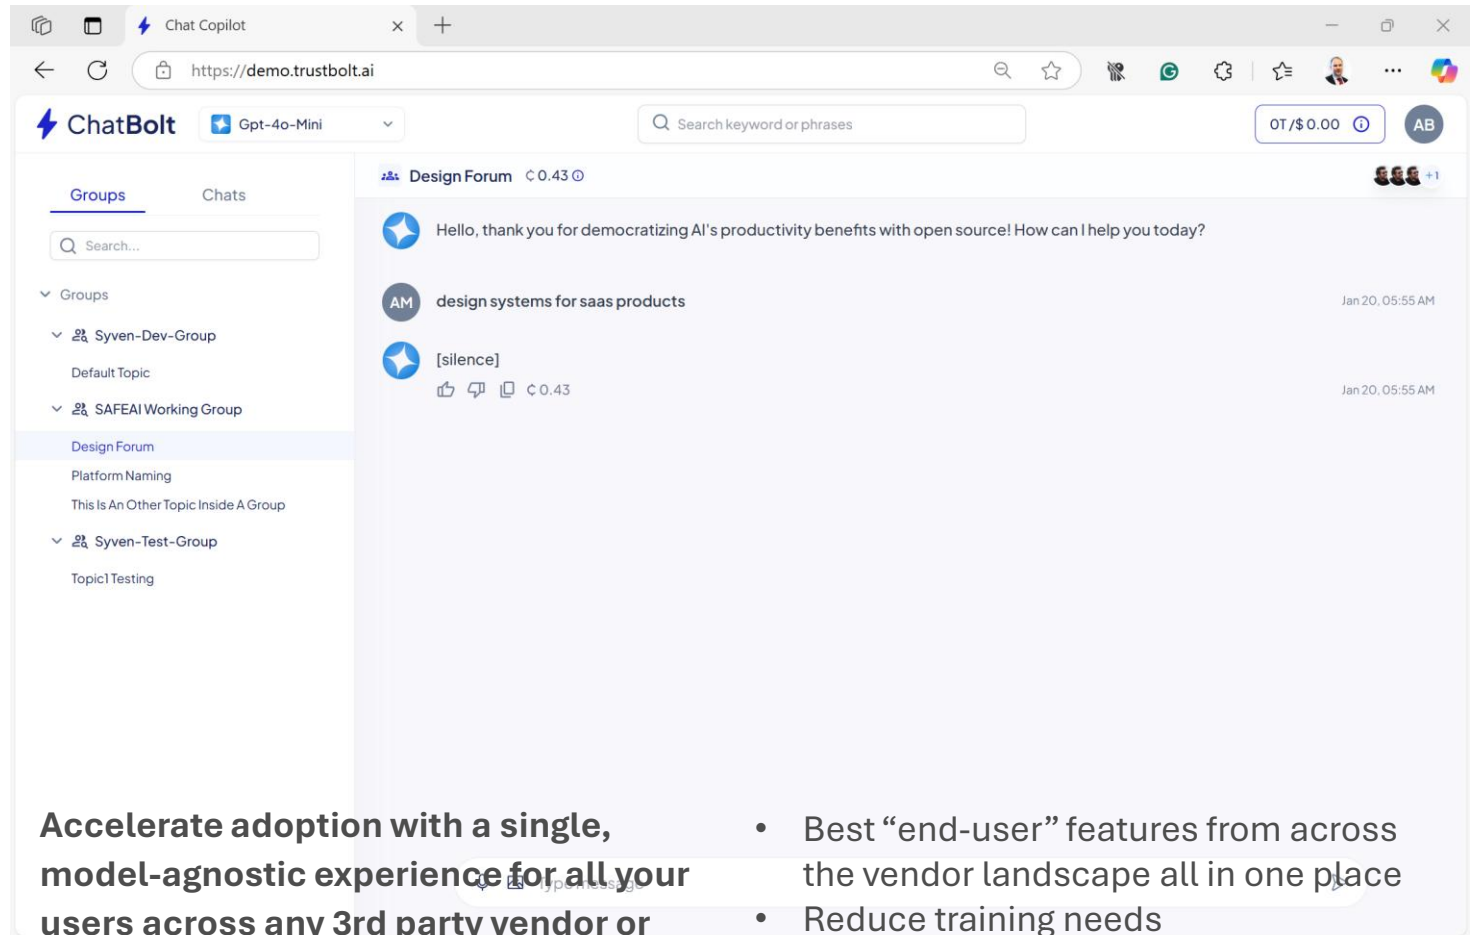

Safe AI starts with Responsible Users encouraged through (Optional) Reminders

When leveraged as part of a broader “AI Awareness” training program, Trustpilot reinforces employee awareness and accountability by regularly reminding employees of their responsibilities.

- Fully configurable rich text editor to allow you to manage the text.
- Configurable to show at every login or periodically.

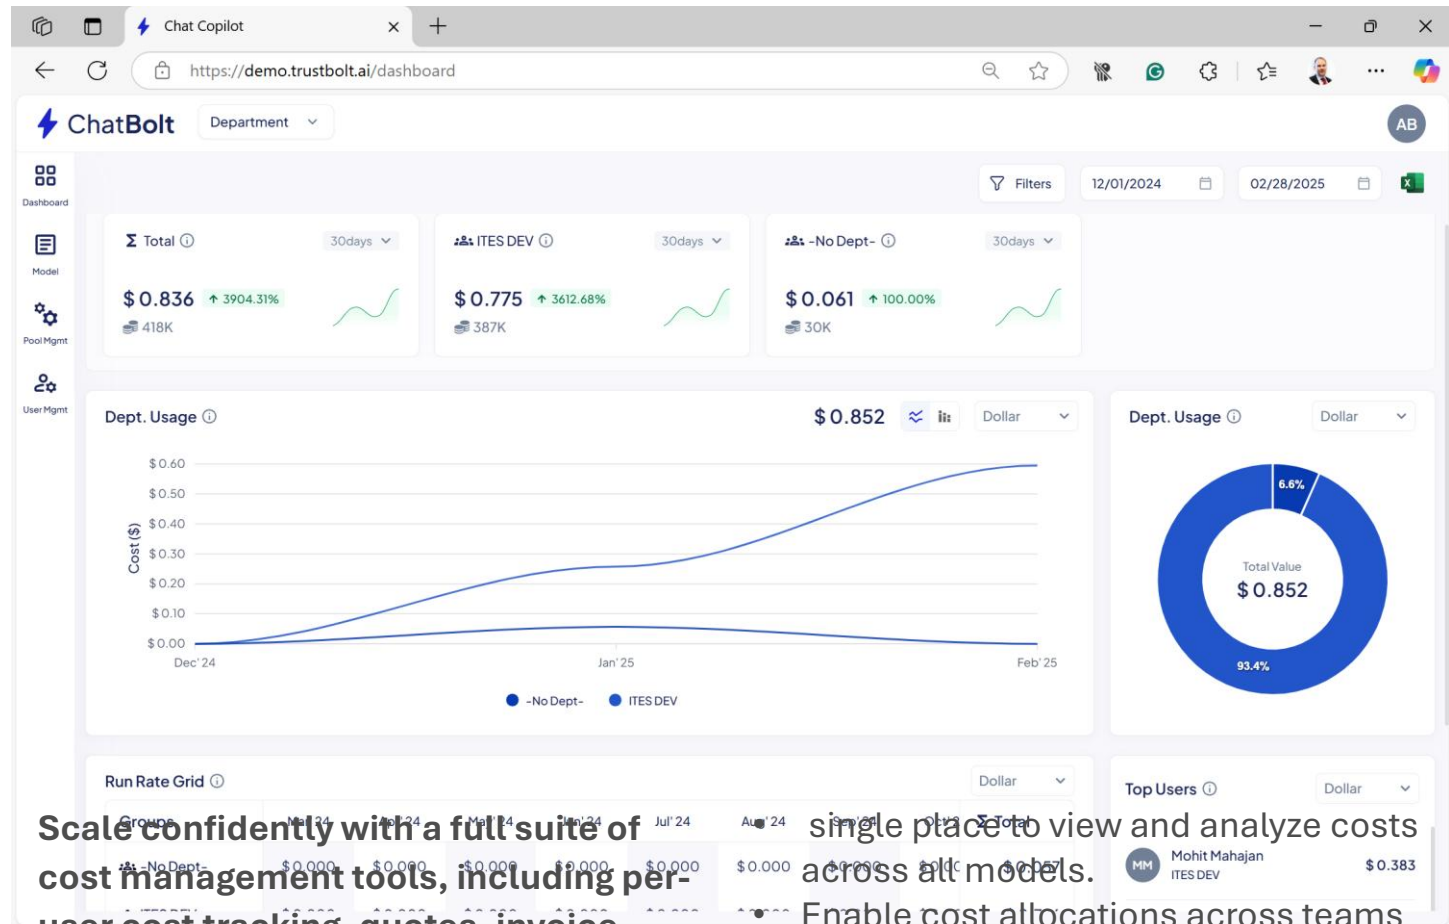

Familiar Single User Experience Independent of any Specific Model

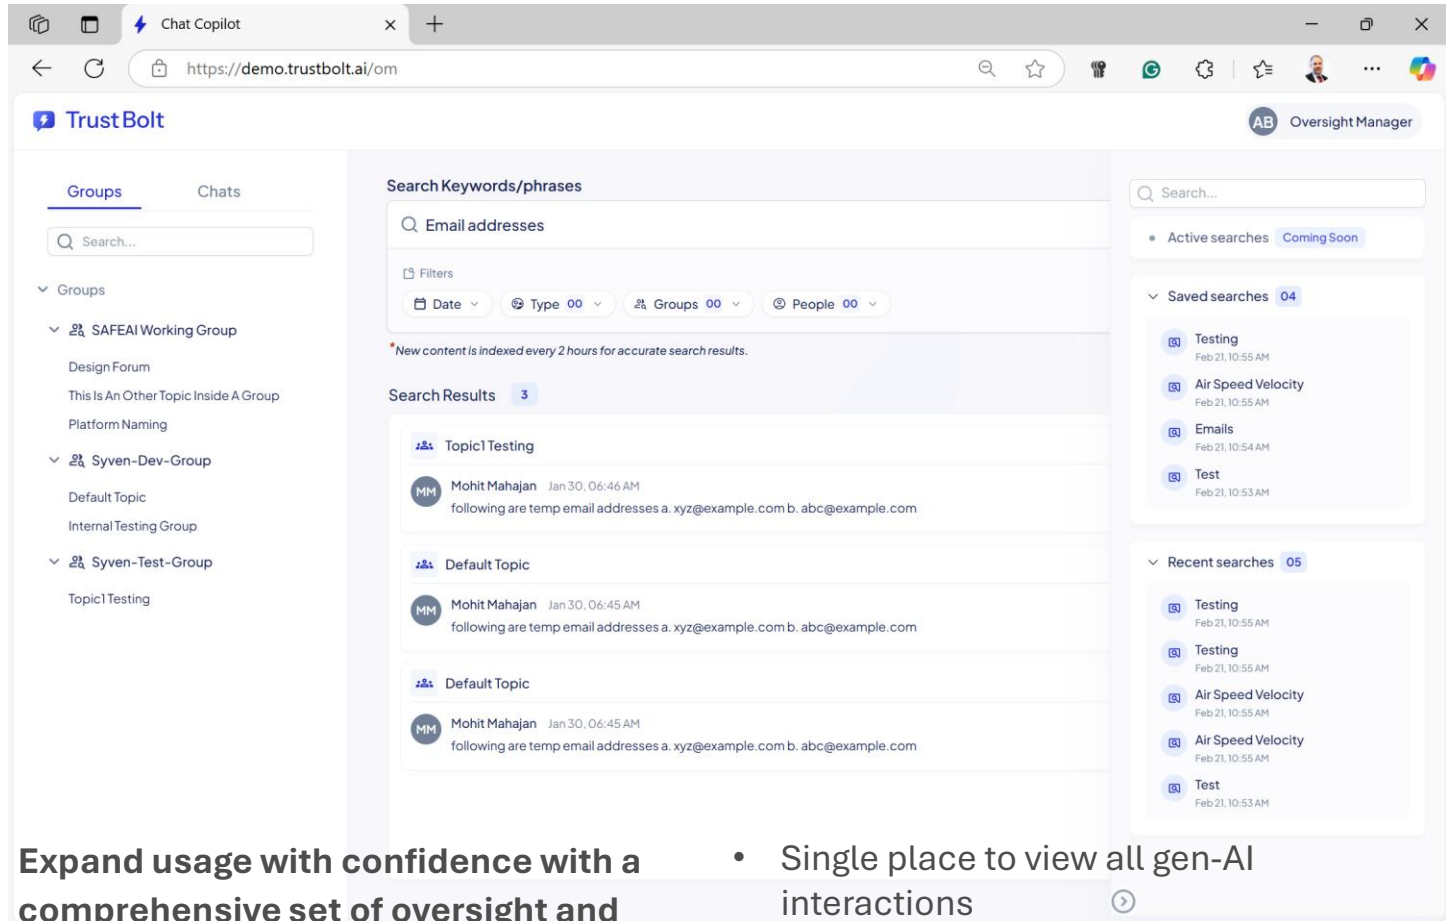

Accelerate adoption with a single, model-agnostic experience for all your users across any 3rd party vendor or internally hosted generative AI models. Includes end-user entitlements and “best” features from across the vendor landscape.

- Best “end-user” features from across the vendor landscape all in one place
- Reduce training needs
- Reduce vendor “lock-in”
- Manage model entitlements and access controls in one place

Cost Manager provides detailed analysis of use trends

Oversight Manager provides full transparency into all data in & out

Expand usage with confidence with a comprehensive set of oversight and governance tools across all models and users. Provide oversight staff with full access to every prompt and response.

- Single place to view all gen-AI interactions
- Pre-canned searches for sensitive information – ie, emails, credit cards, Social Security numbers, etc
- Automatic alerting and notifications (coming)
